Tree-planting and plantation forestry in tropical countries are expanding rapidly. Social and community forestry, tree planting to control soil erosion, and the use of agroforestry, as well as many industrial afforestation projects, are all part of the response to tropical deforestation and are central to much rural development.

Industrial plantations are the “arable” crops of forestry; their principal objective is to grow a product, usually wood fiber, efficiently. The main purposes include fuel production—firewood and charcoal, pulpwood for paper and cardboard, panel products, sawn timber (lumber or sawnwood), and sometimes veneers.

## **Forest Plantations**

Plantation agriculture is more than 400 years old and contributes to the regional and national economies in many tropical countries. This paper reviews some of the main environmental issues related to plantation agriculture with perennial crops, including soil erosion, soil fertility decline, pollution, carbon sequestration and biodiversity.
